DETAILED ACTION

The Communication filed on September 2, 2003 has been acknowledged.

Terminal Disclaimer

1. The terminal disclaimer filed on August 28, 2003 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration dates of US patents 6,203,141 and 6,168,262 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2863

Claims 16 and 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Cowger et al. (US 5,788,388).

Cowger et al. discloses all the claimed features of the invention including:

Regarding claim 16, a replaceable ink container (12) for use in an off axis printing system (Fig. 1), the printing system being responsive to electrical signals produced by the replaceable ink container for controlling printing system parameters (Fig. 2), the replaceable ink container having a leading edge (bottom edge of 12) defined as that edge of the replaceable ink container first received by the printing system (Fig. 3), the replaceable ink container comprising:

- a plurality of electrical contacts (contacts of 72) on a first half of the leading edge at a first side of the leading edge (Fig. 3), the plurality of electrical contacts configured for engaging a plurality of corresponding electrical printer contacts (56's) of the printing system (Fig. 3);

- a fluid outlet (66) on a second half of the leading edge at a second side of the leading edge that is directly opposite to the first side (Fig. 3) such that the fluid outlet is separated from the plurality of electrical contacts (Fig. 3), the fluid outlet being in fluid communication with the replaceable ink container (Fig. 3) and configured for engaging a fluid inlet (52) of the printing system;

- an information storage device (20) electrically connected to the plurality of electrical contacts (Fig. 3).

Art Unit: 2863

Regarding claim 17, the leading edge defines a longitudinal axis with the first side and the second side being disposed on the longitudinal axis (lateral axis of bottom edge).

Allowable Subject Matter

3. Claims 18 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 20 and 22-30 are allowed.

Reasons For Allowance

5. The combination as claimed wherein a replaceable ink container comprising the latch feature is in engagement with corresponding engagement features of the printing system (claim 18) or the electrical interface portion including an engagement portion separated from and positioned opposite to the plurality of electrical contacts (claim 20) or the electrical interface portion is a cavity within the leading edge of the replaceable ink container, the cavity being bisected by the longitudinal axis and having an inner surface with the plurality of electrical contacts thereon (claim 26) is not disclosed, suggested, or made obvious by the prior art of record.

Response to Arguments

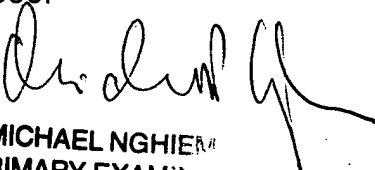

6. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Contact Information

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Nghiem whose telephone number is (703) 306-3445. The examiner can normally be reached on M-H from 6:30AM – 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Barlow can be reached at (703) 308-3126.
